

PROCODING WEB DEVELOPMENT BOOTCAMP

Code your future in IT

120 theory
lessons

15 lab
sessions

72 practice
workshop

3 portfolio
projects

WHY WEB DEVELOPMENT?

Web development is **one of the fastest and most approachable** ways to get into IT.

Unlike system programming or machine learning—where the road to a first job can take years—a web developer can usually land their first role after just a few months of focused practice.

And the demand is global: every company, from small startups to large corporations, needs websites, web apps, and online services.

Here's a rough comparison of how much practice it typically takes to reach a junior level in different fields:

Field	Practice hours to Junior level
Web Development	350–500 hours
C / C++	1000–1500 hours
Machine Learning	1000–2000+ hours

Another reason to choose web development: **the salary.**

- According to Glassdoor, the average salary for a web developer in the US is about **\$99,155 / year.**
- Indeed lists the average base salary at **\$82,889 / year.**
- The US Bureau of Labor Statistics (BLS) reports a median salary of around **\$90,930 / year** (as of May 2024).
- Built In puts the average total compensation (with bonuses) at about **\$98,349 / year.**

But what about job openings—aren't they shrinking because of AI?

As of 2025, there are still **over 10,000 web developer job postings** on Indeed in the US.

It's true that detailed, public year-over-year stats are a bit scattered. But overall, the trend is steady: demand for web developers remains strong, even as automation and no-code tools become more common. According to the BLS, projected job growth for web developers in the US is around **+8% between 2024–2034**—that's above the average growth rate across all occupations

JOB OPPORTUNITIES

After finishing the **ProCoding Web Development Bootcamp**, you'll be ready for your first steps in tech and can apply for different kinds of web development roles:

Full-Stack Developer

Works on both the front end (interfaces) and the back end (server, databases). One of the most in-demand profiles, especially in startups and smaller companies.

Average salary in the US:
\$95K–110K / year.

Front-End Engineer

Builds user interfaces and focuses on the overall user experience (UI/UX). Jobs are common in e-commerce, marketing agencies, and product companies.

Average salary in the US:
\$80K–100K / year.

Back-End Engineer

Takes care of the server side of applications: logic, databases, APIs. Highly valued in fintech, SaaS, and large-scale products with many users.

Average salary in the US:
\$90K–110K / year.

React Developer

Specializes in React. Builds dynamic single-page apps (SPAs) and complex client-side interfaces. Especially in demand among startups and companies focused on web-first products.

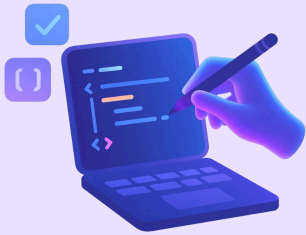

Average salary in the US:
\$85K–105K / year.

Junior Software Engineer

An entry-level position for those just starting out. You'll work under the guidance of more senior teammates and gain real project experience. A great way to solidify what you've learned in the bootcamp and grow quickly.

Average salary in the US: \$65K–80K / year.

PROCODING PEDAGOGY

Learn by doing

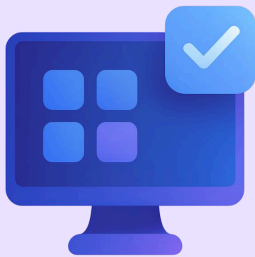

From day one, you'll be writing code, solving problems, and working on projects that feel close to **real-world tasks**. This hands-on approach helps you reach job-ready skills much faster.

Small groups

Each cohort is **limited to 15 students**.

That means you'll always have the chance to ask questions and get personal support. We create an environment where every student gets attention and guidance.

80% practice on real projects

Only the essential theory, plus references to extra resources if you want to dive deeper. Most of your time will be spent on **coding challenges, team assignments, and project development**. You'll practice solving the same kinds of problems web developers face on the job.

Real-time mentor support

Both during and outside of class, you can reach out to **mentors for help**.

We believe no one should be left alone with a problem. Mentors don't just give answers—they explain the reasoning, so you learn to think like a developer.

Lifetime access to the platform and materials

After graduation, you keep **full access to our learning platform**. All lectures, projects, recordings, and extra resources stay with you. You can revisit material anytime, review topics, and go deeper into new technologies even after finishing the bootcamp.

TYPICAL WEEK & DAY

At ProCoding, we know most of our students balance learning with work and personal life. That's why we designed a format that lets you become a web developer without putting the rest of your life on hold.

Online format

- All classes are **live online**.
- You'll have full **access to recordings**
- Communication with instructors and mentors happens through **Zoom & Slack**.

Part-time (6-7 months)

- **16-20 hours** of study per week.
- Classes are held **two weekday evenings** + one longer **weekend session**.
- Between classes, you'll work on **coding assignments and team projects**

A typical week

Tuesday

6-10 PM

Live lecture
& practice

Thursday

6-10 PM

Live lecture
& practice

Saturday

10-12 AM

Live lecture
& practice

+ **Self-paced** learning anytime

1-4 PM

Team project
work

A typical class day (evening)

6:30-7:00 PM

review of past assignments and Q&A

7:00-8:00 PM

live lecture with examples

8:00-9:30 PM

practice: coding tasks, pair programming, mentor support

9:30-10:00 PM

wrap-up and next steps

This schedule makes the bootcamp realistic for adult learners who want to switch careers but can't leave their full-time jobs.

FINANCING OPTIONS

We offer two clear and transparent payment options:

Pay in full

You cover the full tuition with a single payment. Many students choose this option to get the financial side out of the way and focus fully on learning.

Monthly installments

You can split the tuition into several monthly payments. Equal payments, with no hidden fees or interest. A convenient option if you'd like to spread out the cost over time.

You decide which option works best for you—the most important thing is that nothing stands in the way of starting your new career.

Choose the format that works best for you

Premium Plan

\$11,940 / full course \$1,990 / month

- 1:1 calls with a teacher or mentor
- Access to additional modules
- Interview preparation with roleplay sessions (mock interviews)
- Individual career consultations — 1 session per month
- Career support for 3 months after graduation
- Private Premium group chat (strong networking environment & quick expert support)

Standard Plan

\$8,340 / full course \$1,390 / month

- Full access to all learning materials and the platform
- Complete 6-month program
- 3 live classes a week with the teacher
- Hands-on assignments, projects, and code reviews
- Homework and labs with expert feedback
- Community chat and mentor support
- Final portfolio project
- Resume and LinkedIn review (basic package)

PROGRAM DETAILS

Introductory Module

~22 hours

12 lessons

1 workshop

What you'll learn and why it matters

- **HTML & CSS** – to build the structure and design of web pages.
- **JavaScript (basics)** – to add interactivity and logic.
- **Git & GitHub** – to track versions of your code and collaborate with a team.
- **Terminal** – to manage projects and run code without a graphical interface.
- **Visual Studio Code** – to write code in a convenient editor with syntax highlighting, plugins, and debugging.
- **How the Internet works** – to understand how browsers and servers exchange data.
- **Backend (intro to Node.js)** – to see how the server side works and how the frontend connects to a database.

What you'll get

- A clear understanding of the basics of web development.
- A fully set up environment for the rest of the program.
- The essential skills you need to get started in the main bootcamp.

PROGRAM DETAILS

Module 1. HTML, CSS, JS

~125 hours

47 lessons

9 workshops

What you'll learn and why it matters

- **HTML** – to define the structure of a page, work with tags, attributes, and forms.
- **CSS** – to style your pages: colors, fonts, spacing, and responsive layouts (Flexbox, Bootstrap, Tailwind).
- **JavaScript (basic & advanced)** – to bring pages to life: variables, data types, conditions, loops, arrays, objects, functions.
- **DOM** – to manipulate page elements, add interactivity, and respond to user actions.
- **OOP in JavaScript** – to organize code and build scalable solutions.

What you'll get

- The ability to create complete web pages with styling and dynamic elements.
- Hands-on experience with modern tools for responsive design and clean code organization.
- A strong foundation to move on to backend development and start building full web applications.

PROGRAM DETAILS

Module 2. Backend

~130 hours

20 lessons

9 workshops

What you'll learn and why it matters

- **Node.js** – to build the server side using the same language (JavaScript) as the frontend, making full-stack development simpler.
- **HTTP servers & Express** – to handle requests, create APIs, and connect the frontend to a database.
- **Promises, async/await** – to work with asynchronous code without blocking the server.
- **APIs and Fetch/Axios** – to send requests (GET, POST, PUT, DELETE) and integrate external services into your apps.
- **MongoDB + Mongoose** – to store, structure, and manage data. You'll learn CRUD operations and relationships between documents.
- **Middleware** – to add features like authentication, validation, logging, and route protection.
- **Postman** – to test APIs and debug the server side more efficiently.

What you'll get

- The ability to build servers and APIs that work with real data.
- Skills to store and process user information (registration, login, forms).
- Experience integrating external services and databases.
- The foundation to develop full-stack applications with a working backend.

PROGRAM DETAILS

Module 3. React

~110 hours

17 lessons

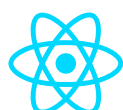

6 workshops

What you'll learn and why it matters

- **JSX and components** – to build interfaces out of reusable elements.
- **Props and state** – to pass data and manage application state.
- **Hooks** (useState, useEffect, useContext, useForm) – to write modern, concise code without classes.
- **Component lifecycle** – to control data updates and side effects.
- **Forms in React** – to handle user input without reloading the page.
- **Conditional rendering, lists, and keys** – to dynamically control how elements are displayed.
- **React Router** – to create multi-page applications with smooth navigation.
- **Integration with backend and REST APIs** – to connect your app to a server, send requests, and handle errors.

What you'll get

- The ability to create dynamic interfaces and manage their state.
- Skills to build modern multi-page applications.
- A solid grasp of writing clean, maintainable, and reusable code.
- The experience to integrate React with a backend and build full web applications.

PROGRAM DETAILS

Additional Technologies & Technical Interview Preparation

What you'll learn and why it matters

- **PHP & MySQL** – to understand the basics of server-side development and relational databases.
- **Vue.js & Angular** – to learn alternative frontend frameworks and stay flexible when applying for jobs.
- **WordPress** – to quickly build websites and manage content without deep coding.
- **Libraries & APIs (Axios, Lodash, etc.)** – to speed up development and work with external services.
- **TypeScript** – to write more reliable and scalable code, especially for React projects.
- **Technical interview prep** – to practice strategies, common questions, and coding tasks.
- **Interview Question Library** – to review and practice frequent JavaScript and React interview questions.

What you'll get

- The ability to adapt to different technologies required by employers.
- Practical skills with extra tools to make development faster and easier.
- Confidence going into technical interviews, from theory to coding challenges.
- Better chances of landing a job quickly and onboarding smoothly into a team.

PROGRAM DETAILS

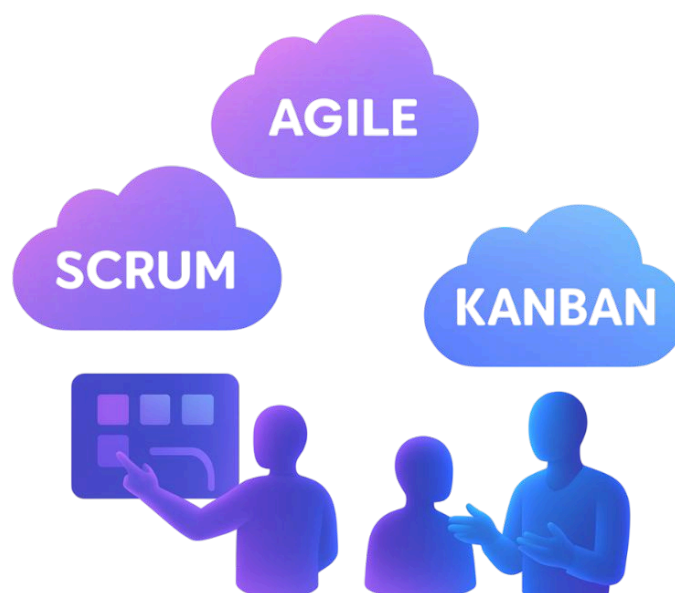

Methodologies: Agile, Scrum, Kanban

What you'll learn and why it matters

- **Agile** – the philosophy of flexible development: how to adapt to change and respond quickly to new requirements.
- **Scrum** – roles, sprints, and rituals (daily stand-ups, retrospectives, reviews) to collaborate effectively in a team.
- **Kanban** – visualizing tasks and tracking progress to stay productive and transparent.

What you'll get

- Experience working with real development processes used in modern companies.
- The ability to integrate smoothly into teams that use agile methodologies.
- Improved quality and speed when working on projects.

CAREER SERVICES

We support students not only during the bootcamp, but also on their way to landing their first job. Our goal is for ProCoding graduates to enter the job market as confident, well-prepared professionals.

1:1 Career Coaching

- One-on-one sessions with a career coach.
- Guidance on choosing your path: frontend, backend, or full-stack.
- Building a personalized career plan and job search strategy together.

Resume and LinkedIn Support

- Writing and editing your resume to meet US market standards.
- Optimizing your LinkedIn profile so it stands out to recruiters.
- Tips on how to present your portfolio projects effectively.

Interview Preparation

- Practicing answers to common technical questions (JS, React, Node).
- Working on soft skills: self-presentation, handling objections, and stressful questions.
- Mock interviews with mentors and detailed feedback.

Demo Day with Projects

- Final team project presentations in front of industry experts and invited recruiters.
- Direct feedback from professionals in the field.
- A chance to connect with potential employers face-to-face.

With this support, graduates don't just gain knowledge—they enter the job market with a strong portfolio, polished communication skills, and the confidence to succeed.

READY TO START YOUR CAREER IN IT?

The **ProCoding Web Development Bootcamp** is your path to becoming a web developer in just **6–7 months**.

You can apply right now:

Go to **procoding.com** and reach out to our team through the contact form.

Want 10% off?

Mention the promo code **WEB10** when you talk to our team.

Don't wait—spots are limited! Start coding your future today.
